PROFILE

Technology professional with a background in IT systems and web development, now focused on building and evolving digital applications. I define features, interfaces, data and integrations with the help of artificial intelligence tools, and take them to production. I combine problem solving, care for the user experience and technical validation.

RECENT PROJECTS

Building and evolving features with AI support, review and testing.

Task and project management

Kanban views, tasks, habits and notes. Evolution of content editors, tags and autosave, with permission reviews and data preservation.

Project finance tracking

A module for documents, amounts, expenses, due dates and payments. Information organised per project, with persistence and data consistency checks.

Forms and participant experience

Improved flows to save drafts, resume forms and review submitted answers through read-only reports. Functional testing and interface review.

EXPERIENCE

IT systems technician · Grupo SANED

2016 – present · Madrid (remote since 2020)

IT department. Computer systems, web development and video editing.
